¹ The difference between agricultural statistics of the Census of Occupations and those of the Census of Agriculture is largely due to the fact that every farm operator is listed as a farmer in the latter, while in the former, he is listed under his principal occupation.

² Does not include "check weighers"

³ Doubtless some overlapping between persons engaged in the production and distribution of natural gas and artificial gas; also those working at petroleum refineries or pipe lines and those at oil wells.

⁴ Includes, also, all technical engineers not elsewhere classified.

⁵ Some of these probably are working in paint shops rather than in paint factories.

⁶ Some deliverymen doubtless were returned and classified as chauffeurs, and others as teamsters or truck drivers.

⁷ In some cases it was difficult from the enumerators' returns to distinguish persons working in butter, cheese, and condensed-milk factories from persons working for milk distributing companies or persons working on dairy farms.

⁸ Sometimes it was impossible from the enumerators' returns to distinguish between workers in stockyards and workers in slaughter and packing houses.

⁹ Includes tin-plate mills. Doubtless some overlapping between workers in blast furnaces and steel rolling mills and workers in iron manufacturing establishments.

¹⁰ In some cases it was difficult to distinguish between workers in car and railroad shops and workers on steam and street railroads.

¹¹ Includes iron foundries.

¹² Includes box factories (wood).

¹³ Sometimes it was impossible from the enumerators' returns to distinguish between workers at airports and workers in airplane factories.

¹⁴ Doubtless there is considerable overlapping between locomotive engineers and stationary engineers, and between locomotive firemen and firemen of stationary boilers.

¹⁵ Probably painters of boats and ships.

¹⁶ May include some vault custodians.

¹⁷ Includes only persons specifically returned as "clerks" in stores. Many of these probably are "salesmen and saleswomen."

¹⁸ Includes bundle and cash boys and girls.

¹⁹ Includes accountants and auditors for accounting and auditing companies.

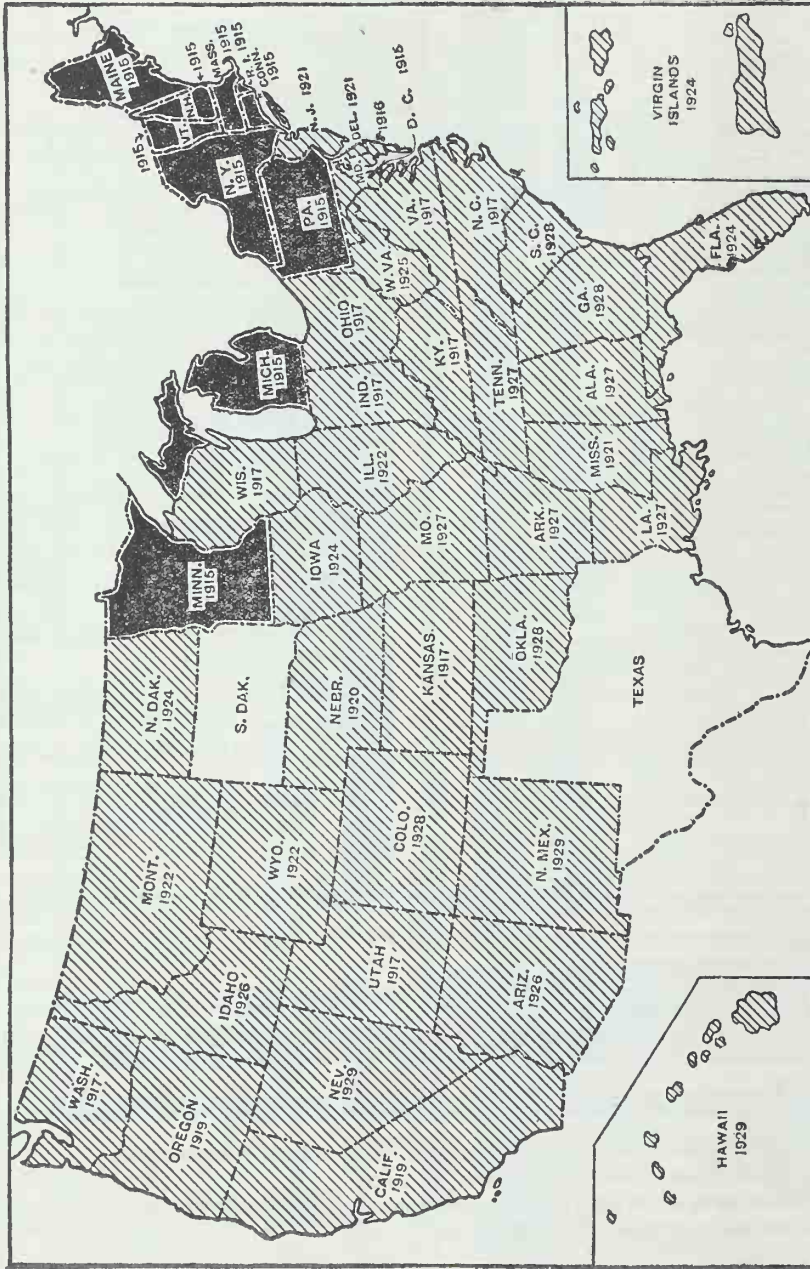

²⁰ Includes public stenographers.

²¹ Public service, as here presented, does not as a rule include those public employees who, occupationally, can be better classified elsewhere—public school teachers, postal employees, etc.

²² Some owners of hand laundries probably are included with laundry operatives.

VITAL STATISTICS, BIRTHS AND INFANT MORTALITY

GROWTH OF REGISTRATION AREA FOR BIRTHS: 1915 TO 1930

 ORIGINAL REGISTRATION STATES, 1915
  STATES ADDED SINCE 1915
  STATES NOT IN REGISTRATION AREA

CHAPTER XV.—VITAL STATISTICS, BIRTHS AND INFANT MORTALITY

The registration area and classification of births.—The statistics given here were compiled by the Bureau of the Census from data on transcripts of birth, death, and stillbirth certificates received from the registration areas.

The birth registration area was established in 1915 and the report at that time included data for only 10 States and the District of Columbia. In 1920 the birth registration area comprised 23 States and the District of Columbia, having approximately 59.8 percent of the total population of the United States and about 37.5 percent of the total Negro population. In 1930 and 1931 the birth registration area embraced 46 States and the District of Columbia (all States except Texas and South Dakota) and was estimated to contain 94.7 percent of the total population and about 92.8 percent of the Negro population.

The classification of births and deaths by race distinguishes white, Negro, Indian, Chinese, Japanese, and "other races" which includes Mexicans, so far as reported as such. The term "colored", as used in many of the tables in this chapter, includes the non-white population for which data by race were not separately reported by States, or if reported, were considered by the Bureau to be too deficient to justify a presentation by racial designations such as Negro, Indian, Chinese, etc. However, 14 of the 23 tables in this chapter relate to the Negro and other colored population, while 9 relate to the colored population as a whole. Only States in which Negroes constitute 55 percent or more of the total "colored" population have been included in the tables relating to the colored population, except in tables 9, 11, 12, and 13 which relate to the entire registration area. The 15 omitted States had a combined Negro population, in 1930, of only 142,004, or 1.2 percent of the total Negro population of the United States, a number too small to affect materially the Negro-birth or infant mortality figures.

Ratio of births to deaths.—For the Negro population, births outnumbered deaths in 23 States and in the District of Columbia in 1930. The greatest excesses in 1930 were 9.8, 9.6, 9.1, and 9.1 for Mississippi, North Carolina, South Carolina, and Alabama, respectively.

In 1930 Kentucky, Oklahoma, and Tennessee, and in 1920 Kentucky were the only Southern States in the registration area where Negro deaths exceeded Negro births. It is probable that the excess of deaths over births in these States was largely, if not wholly, due to the failure of colored parents to register births. There were 239,275 Negro livebirths in the registration area in 1930 and this represents a birth rate of 21.7 per 1,000 enumerated Negro population. Total Negro deaths, exclusive of stillbirths, in 1930 numbered 182,009, and represented a death rate of 16.5 per 1,000 Negro population.

In 1930 there were 239,275 Negro births reported in the birth registration area and there were 234,203, or 5,072 less, in 1931. Male births outnumbered female in

both 1931 and 1930 in the area as a whole, but for both years there was an excess of female over male births in several States.

The States with the highest birth rates in 1930 were South Carolina, Connecticut, North Carolina, Mississippi, Alabama, and Virginia.

Births by age of mother.—In 1930, 31.1 percent of the colored births in the 31 States selected from those in the registration area were by mothers 20 to 24 years of age, 22 percent by mothers 15 to 19 years of age, 20 percent by mothers of 25 to 29 years of age, 12.5 percent by mothers 30 to 34 years of age, 8.6 percent by mothers 35 to 39 years of age, 2.6 percent by mothers 40 to 44 years of age, 0.6 percent by mothers 10 to 14 years of age, and 2.6 percent by mothers 45 years of age or over, and those whose ages were unknown or not stated.

Percent of children living to those ever born.—The percent of children living, out of the total ever born to Negro women who bore children, was 88.3 in 1931, as compared with 88.2 in 1930, 87.9 in 1929, 87.5 in 1928, and 86.7 in 1927. The percent of children living out of the total number ever born to white women who bore children in 1931 was 91.8.

Average number of children ever born to Negro women.—The average number of children born to Negro women who bore children in 1931 was 3.6, as compared with 3 percent for white women.

Illegitimate births.—The ratio of illegitimate Negro births to 1,000 total Negro births was 143.4 in 1930 and 153.9 in 1931. The ratio was higher in both years for female than for male births. The ratios were highest in Maryland, Delaware, Alabama, North Carolina, South Carolina, and the District of Columbia. Around 74 percent of the Negro illegitimate births in 1931 and 1930 were by mothers under 25 years of age. The greatest number of illegitimate births was by mothers 15 to 19 years of age.

Birth rates in cities and rural districts.—In 1931 birth rates for the colored population in rural districts equaled or exceeded birth rates for colored in cities in 17 of the 31 States selected from those in the registration area. These 17 States included all the Southern States except Louisiana. The death rate was higher than the birth rate in the cities in 15 of these 31 States. In rural districts the death rate exceeded the birth rate in 13 States, all of which, except Kentucky, were in the North and West.

Births per 100 deaths in cities having 25,000 or more Negro inhabitants.—In 15 cities in 1931 and 17 cities in 1930, out of a total of 31 cities, the colored deaths outnumbered the births. For Kansas City, Mo., Savannah, Ga., and Chattanooga, Tenn., in 1931 the colored births per 100 deaths were 64, 66, and 67, respectively. In all the cities having 100,000 or more Negro inhabitants (New York, Chicago, Philadelphia, Baltimore, Washington, New Orleans, and Detroit) the number of colored births equaled or exceeded

colored deaths, while among the cities having 50,000 to 100,000 Negro inhabitants, Atlanta, Memphis, and St. Louis were the only ones to report an excess of colored deaths over births.

Stillbirths.—The number of Negro stillbirths per 100 Negro live births was 7.6 in 1931 and 8.3 in 1930. The number of stillbirths per 100 live births was greater in cities and incorporated places than in rural districts in both 1930 and 1931.

Infant mortality.—The number of deaths of Negro children under 1 year of age per 1,000 Negro live births was 92.7 in 1931 and 99.5 in 1930 as compared with 56.7 and 59.6, respectively, for white children. The

number of deaths of all colored children under 1 year of age per 1,000 live births was highest in 1931 in Iowa, Delaware, Kentucky, Maryland, and Pennsylvania.

Deaths under 1 year of age by cause.—The percentages of the total Negro deaths under 1 year of age by cause in 1931 were as follows: Premature births, 20.3 percent; diarrhea and enteritis, 10.4 percent; bronchopneumonia, 9.9 percent; lobar and unspecified pneumonia, 5.6 percent; congenital debility, icterus, and sclerema, 5 percent; syphilis, 3.6 percent; injury at birth, 3.5 percent; unknown or ill-defined diseases, 18 percent; and other causes, 23.7 percent.

TABLE 18.—COLORED AND WHITE POPULATION, BIRTHS AND DEATHS, INFANT MORTALITY AND STILLBIRTHS, IN SELECTED REGISTRATION STATES, CITIES, AND COUNTIES, 1931 AND 1930

[Data are included for States in which the Negro population constitutes 55 percent or more of the total colored population, and cities and counties of such States in which data by color are available. "Cities" includes municipalities of 10,000 inhabitants or more in 1930. "Incorporated places" includes minor cities with populations from 2,500 to 10,000 in 1930; the remainder of the State is included in "Rural".]

AREA AND COLOR	POPULATION ESTIMATED AS OF JULY 1										BIRTHS AND DEATHS (Exclusive of stillbirths)						INFANT MORTALITY (Exclusive of stillbirths)						STILLBIRTHS									
	1931		1930		1931		1930		1931		1930		1931		1930		1931		1930		1931		1930		1931		1930					
	Number		Deaths		Births		Deaths		Rate per 1,000 population		Deaths		Rate per 1,000 population		Excess of births over deaths 1		Births per 100 deaths		Number		Deaths of infants under 1 year of age		Per 1,000 births		Number		Rate per 100 live births

1 Includes Negro and other nonwhite races.
 2 A minus (-) sign indicates an excess of deaths over births.
 3 Rate by color not available.
 4 Figures not shown when the number of deaths is less than 100.
 5 Population, Apr. 1, 1930, not available.
 6 Figures for Russell County, Ala., for 1930, include 147 births, 102 deaths at all ages, and 8 deaths under 1 year of age which should be included with those for Phenix City, Ala.
 7 Exclusive of municipalities having 10,000 or more inhabitants on Apr. 1, 1930.
 8 Exclusive of estimated population for Thomaston.
 9 Exclusive of estimated population for Hopkinsville.
 10 Exclusive of estimated population for McAlester.

¹ Includes Negro and other nonwhite races.

² States in which the Negro population constitutes 55 percent or more of the total colored population.

³ 8 quadruplets were reported for 1930, 1 case all living; the other, all stillborn.

CHAPTER XVI—VITAL STATISTICS—MORTALITY

The registration area and classification of deaths.—The statistics given here were compiled by the Bureau of the Census from data on transcripts of certificates of death from registration authorities.

The death registration area in continental United States in 1930 and 1931 included 47 States (all States except Texas), the District of Columbia, and 8 cities in Texas. In 1930, the death registration area contained 96.2 percent of the estimated total population as of July 1, and 94.4 percent of the total Negro population of the United States. In 1920, the death registration area included 34 States, the District of Columbia, and 16 cities in nonregistration States.

The classification of deaths by race distinguishes white, Negro, Indian, Chinese, Japanese, and "other races" which includes Mexican, so far as they were reported. The term "colored", as used in many of the tables in this chapter, includes the nonwhite population for which data by race were not separately reported by States, or if reported, were considered by the Bureau to be too deficient to justify a presentation by racial designations such as Negro, Indian, etc. However, in the tables relating to "colored" are included only States in which Negroes constitute at least 55 percent of the total colored population. Consequently, 16 registration States were omitted from tables for the "colored" population, but these States had in 1930 a combined Negro population of only 142,650 or 1.2 percent of the total Negro population of the United States.

When crude death rates from all causes are shown, caution should be exercised in drawing conclusions as to health conditions in the different localities because of race stock, occupations of inhabitants, the sex and age distribution of the population, and the relative number of deaths of nonresidents.

Cities, incorporated places, and rural areas.—Cities include municipalities of 10,000 inhabitants or more in 1930 and in some States certain towns and townships having a population of 10,000 or more with a population density of 1,000 or more per square mile. Incorporated places include minor cities with a population of 2,500 to 10,000 in 1930. Rural areas include all the population outside of cities or incorporated places with less than 2,500 inhabitants.

Deaths in 1920, 1930, and 1931.—A comparison between the number of Negro deaths in 1930 and 1931, the 2 years when the registration areas were identical, shows a decrease of 8,145 deaths for the entire area, as seen in table 5. Decreases in the number of Negro deaths between 1930 and 1931 occurred in 32 States, while increases were shown in the District of Columbia, and 15 States, all of which except Maryland and West Virginia and the District of Columbia, were in the North and West. Among those States included in the registration area in 1920, 1930, and 1931, Colorado, Kansas, Massachusetts, Minnesota, Mississippi, New Hampshire, and Tennessee, showed fewer deaths during 1931 than 1920, even though there was an increase in the Negro population between 1920 and 1930 in each of these States.

Death rates.—In the registration area in 1920 there were 130,147 Negro deaths (exclusive of stillbirths), from all causes, giving a crude death rate of 18.7 per 1,000 Negro population as compared with 185,503 deaths and a crude death rate of 16.5 in 1930.

Decreases in Negro death rates in 1931 over those in 1930 were reported for 31 of the 47 States in the registration area in both years (see table 2).

The District of Columbia and the States in the registration area which reported 50,000 or more Negro population at the 1930 census and which showed increases in death rates in 1931 over 1930, arranged in order of increases were: District of Columbia, Missouri, Maryland, Illinois, Pennsylvania, New York, Kansas, West Virginia, and California. Negro death rates for these States and the District of Columbia varied from 22.4 per 1,000 Negro population for the District of Columbia to 15.3 for California.

The death rates for the Negro population were much higher than for the white population in the District of Columbia and in all States except Maine, New Hampshire, and Vermont in 1931.

The 6 States among those showing 50,000 or more Negro population in 1930, which reported the lowest death rate for 1931, were Oklahoma, Arkansas, Mississippi, Alabama, North Carolina and Louisiana.

Deaths by age and sex.—Significant decreases have taken place during the decade, 1920–30, in the number of Negro deaths in the lower age groups. Table 1 shows that Negro deaths under 1 year of age per 1,000 deaths at all ages declined from 173 in 1920 to 130 in 1930. In the age group, 1 to 4 years, Negro deaths decreased from 70 per 1,000 deaths in 1920 to 45 in 1930. Between 1920 and 1930 decreases for each age group in the number of Negro deaths per 1,000 deaths were reported for all age groups up to and including 29 years. The high peak for Negro deaths of all ages, exclusive of the group under 1 year of age, was in the 20- to 24-year age group in 1920, whereas in 1930 this peak had moved upward to the 50- to 54-year age group.

Of the total 185,503 Negro deaths in 1930, 97,524, or 52.6 percent were males. The number of female deaths per 1,000 deaths of all ages exceeded the proportion of male Negro deaths in the age groups from 10 to 14 years to and including 40 to 44 years, and in the age groups 90 years of age and over. The high peak, in deaths per 1,000 at all ages, exclusive of the group under 1 year of age, for both males and females, was in the same age group, 50 to 54 years.

Death rates in cities, incorporated places, and rural districts in 1930.—The Negro deaths per 1,000 population in cities was 19.8 as compared with 14.2 in rural districts for the registration area in the United States, as shown in table 6.

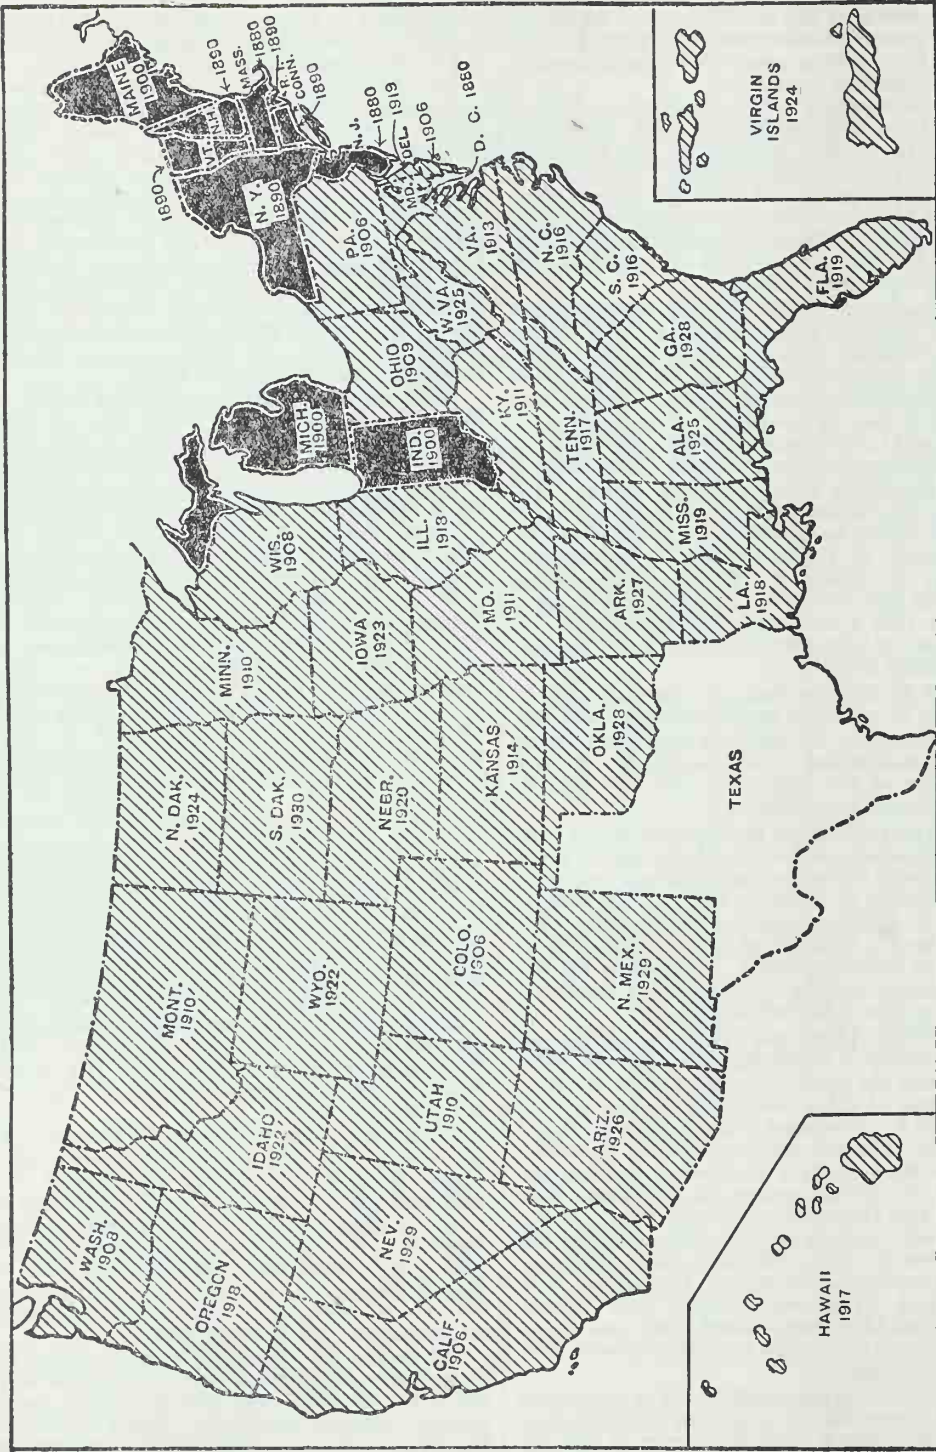

Disregarding comparisons in the District of Columbia, Idaho, New Hampshire, Texas, and Utah, where Negro death rates for either incorporated places or rural districts, or both, were not shown, there were 19 States in which the death rates in rural districts were lower than in either cities or incorporated places in 1930. In 10 States the death rates were lower in cities than in incorporated places or rural districts, and in 9 States the death rates were lower in incorporated places than in cities or rural districts.

Comparing the Negro death rates in cities, incorporated places, and rural districts, it should be noted that for 5 States with over 500,000 Negro population, namely, Georgia, Mississippi, North Carolina, South Carolina, and Virginia, higher death rates were reported in cities than in incorporated places or rural districts, whereas the death rates in rural districts were higher

NEGROES IN THE UNITED STATES

GROWTH OF THE REGISTRATION AREA FOR DEATHS: 1880 TO 1931

Note.—In addition to the registration States, the registration area for each year included certain cities in nonregistration States

 ORIGINAL REGISTRATION STATES, 1900
  STATES ADDED SINCE 1900
  STATES NOT IN REGISTRATION AREA

than in incorporated places or cities for the Northern States of New York, Pennsylvania, Illinois, Michigan, and Kansas, and for California.

Colored death rates in cities having 25,000 or more Negro inhabitants.—Among those cities having 25,000 or more Negro inhabitants in 1930, the highest colored death rate for 1931 was reported for Charleston, South Carolina, with a death rate of 33.6 per 1,000 estimated population. The lowest death rate for colored was for Detroit, Mich., with a death rate of 13.2 per 1,000 estimated population. In no instance was the death rate for white persons in these cities equal to or greater than the death rate of colored persons.

Negro deaths from important causes.—The percentages of the total deaths from important causes in 1931 for registration States, including the District of Columbia, were as follows: Tuberculosis of respiratory system, 10.6 percent; chronic nephritis, 6.5 percent; cerebral hemorrhage, 5.9 percent; lobar pneumonia, 5.1 percent; endocarditis, specified as chronic, and other valvular diseases, 4.4 percent; bronchopneumonia, 2.9 percent; chronic myocarditis and myocardial degeneration, 2.8 percent; syphilis, 2.7 percent; homicide, 2.6 percent; premature birth, 2.6 percent; and diarrhea, enteritis (under 2 years of age), 1.8 percent.

NEGROES IN THE UNITED STATES

TABLE 3.—GROWTH OF REGISTRATION AREA IN CONTINENTAL UNITED STATES: 1880 TO 1931

STATE	Year	STATE	Year
Massachusetts	1880	Virginia	1913
New Jersey		Kansas	1914
District of Columbia ²		North Carolina ⁴	1916
Connecticut	1890	South Carolina	1917
Delaware ¹		Tennessee	1918
New Hampshire		Illinois	1919
New York	1900	Louisiana	1920
Rhode Island		Oregon	1922
Vermont		Delaware ¹	1923
Maine	1906	Florida	1924
Michigan		North Dakota	1925
Indiana		Alabama	1926
California	1909	West Virginia	1927
Colorado		Arizona	1928
Maryland		Arkansas	1929
Pennsylvania	1910	Idaho	1930
South Dakota		Wyoming	1931
Washington		North Dakota	1931
Wisconsin	1911	Alabama	1931
Ohio		West Virginia	1931
Minnesota		Arizona	1931
Montana	1910	Arkansas	1931
North Carolina ⁴		Georgia ⁵	1931
Utah		Oklahoma	1931
Kentucky	1911	Nevada	1931
Missouri		New Mexico	1931
		South Dakota ⁴	1931

¹ Census year ending May 31.
² Included in States.
³ Dropped from the area in the census year 1900, readmitted in 1919.
⁴ Dropped from the area in 1910, readmitted in 1930.
⁵ Included only municipalities having a population of 1,000 or more in 1900; these represented only about 16 percent of the total population.
⁶ The remainder of the State of North Carolina was added to the registration area in 1916. (See note 5.)
⁷ Dropped from the area in 1925 when the State registration law was declared unconstitutional.
⁸ The State was readmitted to the area in 1928 under a new State registration law. (See note 7.)

TABLE 4.—DEATHS (EXCLUSIVE OF STILLBIRTHS), BY COLOR, NATIVITY, AND SEX, IN THE REGISTRATION AREA OF CONTINENTAL UNITED STATES: 1930

COLOR AND NATIVITY	NUMBER			DISTRIBUTION PER 1,000		
	Total	Male	Female	Total	Male	Female
Aggregate	1,343,356	735,600	607,756	1,000.0	1,000.0	1,000.0
Negro	185,503	97,524	87,979	138.1	132.6	144.8

¹ "Incorporated places" included in "Rural."

² Nonregistration State in 1930. Statistics given relate to 8 registration cities only: Beaumont, Dallas, El Paso, Fort Worth, Galveston, Houston, San Antonio, and Waco.

NEGROES IN THE UNITED STATES

TABLE 7.—DEATHS OF COLORED PERSONS (EXCLUSIVE OF STILLBIRTHS), IN CITIES AND RURAL DISTRICTS OF REGISTRATION STATES, BY RACE: 1930

[In this table the term "cities" includes places of 10,000 inhabitants or more; the remainder of the population classed as "rural." Percent not shown where base is less than 100]

¹ Includes Negro and other nonwhite races.

² The term "residents" excludes all nonresidents and includes residents who died elsewhere in the registration area.

³ Figures for Russell County, Ala., include 102 deaths which should be included with those of Phenix City, Ala.

⁴ Reliable data for nonresidents not available.

⁵ Nonregistration State, however, cities shown are in registration area.

⁶ Exclusive of municipalities having a population of 10,000 or more

170	By crushing.....	6	6					
171	By other means.....	14	14					

SUPPLEMENTAL
 (This supplemental list is made in accordance with the requirements of the International Conference at Paris, 1929. The deaths shown in this tabulation are supplemental to those reported opposite Titles 173 to 194, inclusive. Comparable figures for titles shown in prior years will be found opposite the International List Titles. To obtain the total number of deaths in 1931 due to any of the accidental causes, the supplemental figures should be added to those reported opposite the International List numbers in the regular table.)

Punch symbol

201	Accidents in mines and quarries.....	172	172

CHAPTER XVII.—RETAIL BUSINESS

Negro proprietorship in retail business.—In this chapter are presented data collected at the first Nation-wide census of retail business in 1930 for the 1929 business operations of retail stores conducted by Negro proprietors in the United States. At the request of a number of organizations of colored people, stores operated by Negro proprietors are classified separately, and in all States in which there are enough such stores to justify analysis, the stores are classified by kind of business.

This census shows in the United States 25,701 stores operated by Negroes whose sales aggregate \$101,146,043. The principal classifications are:

- Grocery stores.
- Filling stations.
- Restaurants and lunch rooms.
- Cigar stores and cigar stands.
- Drug stores.

The figures given will form a basis by which the progress of the Negro in retail business may be measured from time to time. It is particularly fortunate that the base or reporting year was 1929, for no subsequent year to date would have provided what might be described as a normal comparison of the various kinds of business. The data will be particularly useful to retailers, wholesalers, manufacturers, publishers, advertisers, and students of retail business.

Scope of the retail census.—Retail business, as covered in this census, is the process of purveying goods to ultimate consumers for consumption or utilization, together with services incidental to the sale of goods. The function of the retailer is primarily to anticipate the wants of the consumer and to make available, at the right time and at a convenient place, a reasonable selection of goods capable of satisfying those wants. The distinguishing characteristic of a retailer is that the business is done in a retail manner, in a place of business open to the general public. The census does not include wholly service businesses, such as laundries, dry cleaners, barber shops, and the like, nor does it include the professions, such as medicine and law, nor does it include public utilities, such as water, gas, and electricity. Some semiservice businesses, such as garages, which sell a substantial amount of merchandise in addition to service, are included. In such cases the service income is included in the same total with the sale of merchandise. Bakeries, planing mills, power laundries, and cleaning and dyeing establishments for many years have been included in the census of manufactures, and therefore they were not reported by the enumerators as part of the retail census. Bakery-goods stores shown in the retail reports are those which do not produce their own goods, or which produce them in quantities too small to be included in the census of manufactures. Lumber yards which manufacture their own lumber and millwork are likewise excluded, as are hotel dining rooms.

How stores are classified.—The information in this report is shown under kind-of-business classifications.

The business classification, although usually related broadly to the kind of merchandise carried, is not synonymous with a merchandise or commodity classification. For instance, grocery-store sales are not exclusively sales of groceries; ready-to-wear stores sell accessories and sometimes shoes in addition to outer apparel; drug stores sell many lines other than drugs; furniture stores sell floor coverings and electric household appliances, and department stores sell furniture. Stores are classified according to their principal commodities or according to their popular designation.

Analyzing a \$12,000 store.—In most kinds of business the gross margin on a \$12,000 volume of sales ranges between \$2,500 and \$3,500, and the average does not exceed \$3,000. That is, the cost of the merchandise which must be replaced as it is sold is about \$9,000, and \$3,000 is left to cover all expenses.

About \$750 of this \$3,000 is required for insurance, taxes, repairs, and upkeep of premises, light, heat, power, communication, occasional advertising, and other essential and unavoidable operating expenses, before taking into consideration the largest items of expense, which are pay roll and rent. Rent averages more than 4 percent of sales, or about \$500 a year for a business doing \$12,000. It makes little difference in this expense whether the premises are leased and the expense is actually in the form of rent, or whether the premises are owned by the proprietor and the equivalent of rent must be met in the form of fixed charges, depreciation, and interest. More than 72 percent of the total business in the country is done in leased premises.

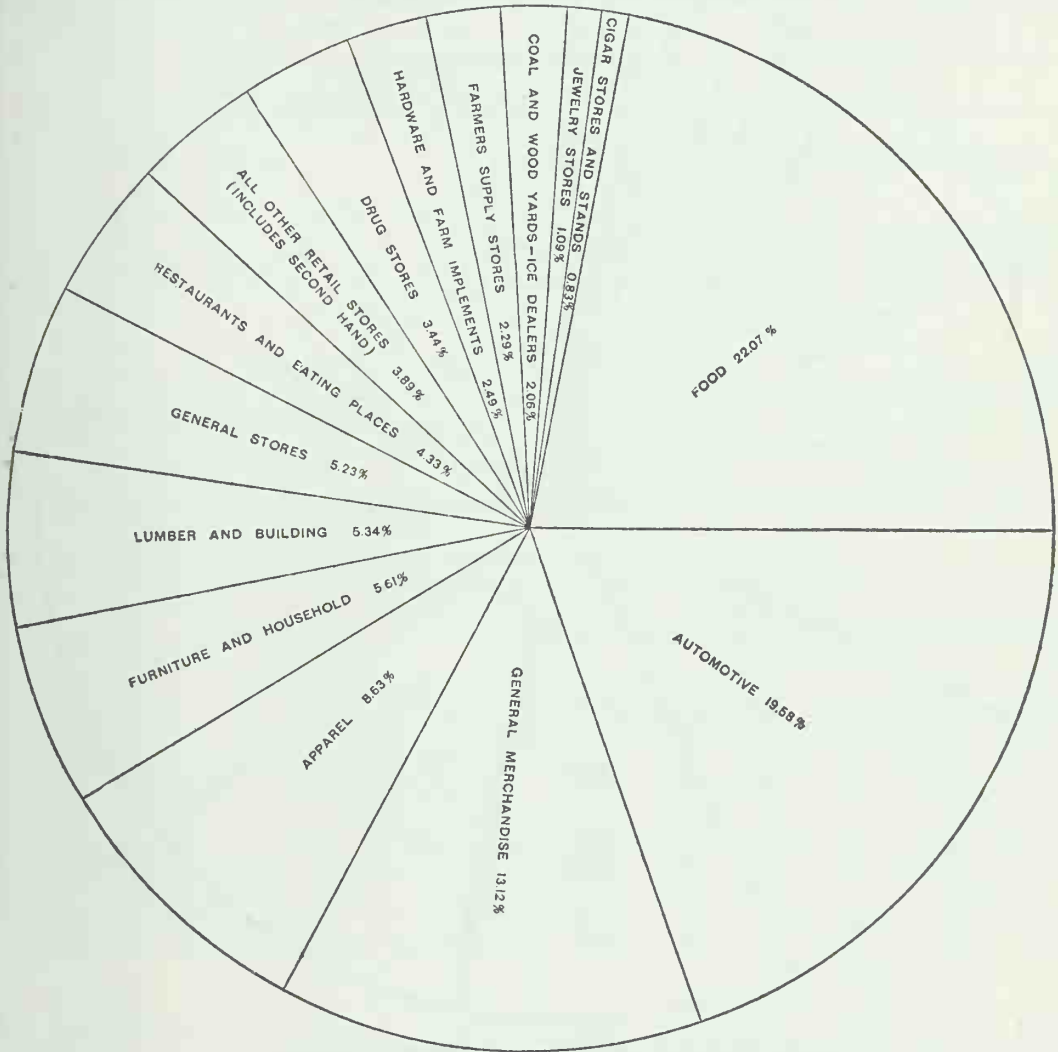

The \$500 for rent and \$750 for essential operating expenses leave a margin of about \$1,750 for pay roll and possible profit. A store doing \$12,000 of business requires at least two sales people. If the proprietor and members of his family are competent to serve in this capacity, it is possible for them jointly to realize from the business a total income of the full \$1,750. If the proprietor alone works in the store, he must reinforce his own services with services of one full-time employee and usually one part-timer. The proprietor then realizes, for his own services and as a profit on his working capital, only that part of the \$1,750, which is left after paying the wages of his employees.

It is evident, therefore, that even an efficiently operated \$12,000 store can provide but a limited wage for any of the people employed in it, whether they are employees or members of the family or the proprietor himself.

Why very small stores can survive.—Competition in the retail business is severe, and as in any kind of merchandise there is just enough margin between the average purchase price and the retail price to cover the necessary operating expenses of the average store. Stores making a profit are those which can purchase below the average price or can operate below the average ratio of expense. The very small retailer who is merely turning over goods bought in the same form in which they are sold is restrained by competition

SALES OF EACH GROUP OF STORES

SALES OF EACH GROUP OF STORES IN PROPORTION TO THE SALES OF ALL STORES IN THE UNITED STATES

(1,543,158 STORES WITH SALES OF \$49,114,653,269)

NEGRO PROPRIETORSHIP—SALES OF EACH GROUP OF STORES

25,701 STORES WITH SALES OF \$101,146,043

to about the average selling price, unless he operates in noncompetitive neighborhood locations or in hours when competing stores are closed. But there is nothing except his own ingenuity and sound credit standing to hold down the cost of the goods which he must purchase, and nothing but his own ability to hold down operating expenses.

Every mistake in buying or in selling, and every expense incurred, necessarily must be met from the slim margin between the selling price and the replace-

ment cost of the goods, when nothing but merchandise is sold. But when the selling price includes a margin for processing or converting the goods into a form other than that in which they are bought, or when the income consists of the sale of services primarily, and supplies incidentally, the business provides a much larger margin for the services of the proprietor. The heavy mortality in small stores comes from the other class—those who depend solely upon the sale of merchandise in the same form in which it is bought.

¹ Includes 4 custom tailors.
² Includes 1 hook store, 1 dry goods store, 2 florists, and 1 household appliances store.
³ Includes 1 household appliance store, and 1 radio and music store.
⁴ Includes 2 heating and plumbing shops.
⁵ Includes 1 beauty and barber shop, 5 florists, 1 hardware store, 1 locksmith, 1 monument and tombstone shop, 1 news dealer, and 11 undertakers' and funeral supplies stores.
⁶ Includes 1 photographer and illustrator, 4 undertakers' and funeral supplies stores.
⁷ Includes 1 toy shop, 1 beauty and barber shop, 2 toilet articles shops, 3 florists, 1 malt products supplies store, 33 news dealers, 1 novelty and souvenir shop, 5 patent medicine stores, 1 pet shop (animals, birds, and fish), 2 printers and lithographers, 1 regalia, badges, and emblems shop, 1 religious goods store, 2 sanitary supplies stores, 2 sign shops, 30 undertakers' and funeral supplies stores.
⁸ Includes 1 glass and mirror store, 1 patent medicine store, 1 printer and lithographer, and 3 undertakers' and funeral supplies stores.
⁹ Includes 1 florist, 1 art and gift shop, 1 malt products supplies store, 1 printer and lithographer, and 1 janitors' supplies store.
¹⁰ Includes 1 florist, 1 printer, 2 toilet articles shops, and 3 undertakers' and funeral supplies stores.
¹¹ Includes 1 novelty and souvenir shop, 3 patent medicine stores, and 8 undertakers' and funeral supplies stores.
¹² Includes 1 variety, 5-and-10, and to-a-dollar store.
¹³ Includes 1 paint and glass store.
¹⁴ Includes 1 chemicals store, 2 florists, 1 photographer and illustrator, 2 printers and lithographers, 1 second-hand store, and 2 undertakers' and funeral supplies stores.
¹⁵ Includes 30 news dealers, 5 florists, 1 barbers' supplies store, 2 opticians, 3 malt products supplies stores, 5 patent medicine stores, 6 printers and lithographers, 2 regalia, badges, and emblems stores, 2 stationers and engravers, 1 typewriter shop, and 5 undertakers' and funeral supplies stores.
¹⁶ Includes 1 men's and boys' clothing and furnishings store and 1 family-clothing store.
¹⁷ Includes 1 news dealer.
¹⁸ Includes 1 dry goods store and 1 variety, 5-and-10, and to-a-dollar store.
¹⁹ Includes 1 antique shop.
²⁰ Includes 1 electrical shop (without radio), and 1 lumber and building material dealer.
²¹ Includes 2 florists, 1 news dealer, 1 optician, 3 patent medicine stores, 4 printers and lithographers, and 1 undertakers' and funeral supplies store.
²² Includes 1 barbers' supplies store, 3 florists, 3 malt products supplies stores, 24 news dealers, 1 optician, 2 patent medicine stores, 2 printers and lithographers, 2 regalia, badges, and emblems stores, 2 stationers and engravers, 1 typewriter shop, and 4 undertakers' and funeral supplies stores.
²³ Includes 3 garages and repair shops.
²⁴ Includes 4 news dealers.
²⁵ Includes 4 beauty and barber shops, 2 toilet articles shops, 1 embroidery and needle work shop, 9 florists, 7 news dealers, 3 novelty and souvenir shops, 3 opticians and optometrists, 4 patent medicine stores, 2 sanitary supplies stores, 1 stationer and engraver, 38 undertakers' and funeral supplies stores.
²⁶ Includes 3 radio and music stores.
²⁷ Includes 1 beauty shop, 1 news dealer, 1 novelty and souvenir shop, and 7 undertakers' and funeral supplies stores.
²⁸ Includes 1 apparel store.
²⁹ Includes 1 furniture store, 1 other household appliance store.
³⁰ Includes 1 florist and 1 news dealer, 7 undertakers' and funeral supplies stores.
³¹ Includes 2 florists, 2 foods stores, 5 printers and lithographers, 2 radio and music stores, 1 sanitary supplies store, and 6 undertakers' and funeral supplies stores.
³² Includes 1 beauty shop, 4 florists, 2 news dealers, 1 novelty shop, 1 optical shop, 1 patent medicine shop, 2 printers and lithographers, and 9 undertakers' and funeral supplies stores.

CHAPTER XVIII.—RELIGIOUS BODIES

The census of religious bodies.—A census of religious bodies has been taken once every 10 years since 1906. The statistics given here relate to the last census which was taken for 1926, or to the church-record year most nearly conforming to the end of that year. These data were obtained from persons connected with local church organizations either by mail or by special agent.

The statistics presented here include, besides the number of live churches with their membership, statistics of church edifices and parsonages, value of property and the amount of debt thereon, expenditures classified under two heads—local expenses and benevolences, missions, denominational support, etc., and statistics of Sunday schools conducted by local churches. In 1926 the information on the schedule was tabulated separately for urban and rural churches. Urban churches were those located in cities or other incorporated places which had 2,500 inhabitants or more on January 1, 1920. Rural churches were those located outside such incorporated places.

Number of churches.—Of the 213 religious bodies represented in the 1926 census, 24 were exclusively Negro, while 30 which were primarily white denominations had one or more Negro churches among their number. Following the plan used in 1906 and 1916, no effort was made in 1926 to enumerate the individual Negro members belonging to local white churches. The total number of Negro churches reported was 42,585 in 1926, of which the Negro Baptists had 22,081; the African Episcopal Church, 6,708; the colored Methodist Episcopal Church, 2,518; and the African Methodist Episcopal Zion Church, 2,466. Among white denominations, having a certain number of Negro congregation, the Methodist Episcopal Church had by far the most, 3,743. These five bodies had 88.1 percent of all the Negro churches in the United States.

In 1926 there were 37,790 Negro churches in the South, or 88.7 percent of the total. The States with the largest number of churches were Georgia, Alabama, Mississippi, Texas, North Carolina, and South Carolina.

Growth of churches.—The number of churches included in the tables showing comparative data was the number reporting membership figures.

The net increase or decrease in the number of churches of a particular denomination may not indicate actual growth or decline, because certain denominations have been influenced by organic changes. These changes, together with changes in name, are:

NEGRO BAPTISTS—Returned as National Baptist Convention in 1916 and 1906.

UNITED AMERICAN FREE WILL BAPTIST CHURCH (COLORED)—Returned as Colored Free Will Baptists in 1916.

COLORED PRIMITIVE BAPTISTS—Returned as Colored Primitive Baptists in America in 1906.

CHRISTIAN CHURCH (GENERAL CONVENTION OF THE CHRISTIAN CHURCH)—Returned as Christian Church (American Christian Convention) in 1916, and as Christians (Christian Connection) in 1906.

CHURCH OF GOD—Returned as Churches of God, General Assembly, 1916.

CHURCH OF THE LIVING GOD⁴ “THE PILLAR AND GROUND OF TRUTH”—Church of the Living God, and Church of the Living God, General Assembly, (returned as the Apostolic Church in 1906), reorganized as one body in 1926.

CONGREGATIONAL CHURCHES—Evangelical Protestant Church of North American annexed in 1925.

INDEPENDENT CHURCHES—Formerly included the Federated Churches.

UNITED LUTHERAN CHURCHES—Formed by the merger in 1918 of the General Synod, the General Council (exclusive of the Augustina Synod), and the United Synod in the South.

EVANGELICAL LUTHERAN SYNODICAL CONFERENCE OF AMERICA—This body represents the federation of the four separate synods: The Missouri Synod, the Joint Wisconsin Synod, the Slovak Synod, and the Norwegian Synod.

The number of Negro churches reported was 36,563 in 1906, 39,592 in 1916, and 42,585 in 1926, or an increase of 8.3 percent between 1906 and 1916 and an increase of 7.6 percent between 1916 and 1926.

Church membership.—The Negro membership reported in 1926 totaled 5,203,487, or 9.5 percent of all church members in the United States. The distribution by membership was as follows: Negro Baptists, 61.4 percent; African Methodist Episcopal Church, 10.5 percent; African Methodist-Episcopal Zion Church, 8.8 percent; Methodist Episcopal Church, 6.4 percent; Colored Methodist Episcopal Church, 3.9 percent; Roman Catholic Church, 2.4 percent; Protestant Episcopal Church, 1 percent; and all other denominations, 5.6 percent.

The average number of members to a Negro church was decidedly below the average for all churches. The excess of females among the membership of Negro churches was pronounced. In 1926, there were only 61.9 males for every 100 females.

Negro church membership during the last two decades has been growing at the same rate as the population. There were 3,691,844 Negro church members in 1906; 4,602,805 in 1916; and 5,203,487 in 1926.

The figures for the several denominations for 1906, 1916, and 1926 do not adequately portray membership growth in the various decades; not only because of organic denominational changes, but also because of basic changes in the definition of a “member” adopted within these dates by certain denominations. Between 1916 and 1926 the Protestant Episcopal Church and the Lutheran bodies changed their definition of membership.

Prior to 1916 most Episcopal churches limited the term “members” to persons who were communicants, while after that date the definition was extended to include all baptized persons in the congregation. The effect of this change was a great increase in the number of members under 13 years of age. The same situation prevailed for the Lutheran denominations.

In 1906, in order to put the figures for all different bodies on a comparable basis, it was decided to exclude baptized children who were members. For the Roman Catholic Church, it was necessary to estimate the number of children who had not been confirmed to full membership and deduct this number from the membership reported. However, at later censuses, conditions changed and the number of members as presented in the tables for the year 1906, include all members without regard to age, whether or not they had been confirmed to full membership.

Sunday schools.—Denominational Sunday schools were reported by 85.4 percent of all Negro churches in 1926. Of the 54 denominations having one or more Negro churches, only 3 very small bodies reported no Negro Sunday school. Colored Sunday school officers and teachers numbered 298,283 and scholars, 2,144,553, an average of approximately 7 scholars per teacher.

Value of church edifices and debt.—The value of 37,347 Negro church edifices reported in 1926 was \$205,782,628 or an average of \$5,510 per church. Certain Negro churches of white denominations had higher values than churches of exclusively Negro denominations.

Debts on church edifices were reported on 23.5 percent of all the Negro churches reporting edifices in 1926. The average debt was \$2,496.

Value of parsonages and debt.—In 1926, 15.4 percent of all Negro churches reported the value of the parsonage. The average value of the parsonage per church was \$2,770. Of the 6,543 Negro churches reporting parsonages, 21.4 percent reported debts. The average debt was \$1,304.

Church expenditures.—The average amount of expenditures per Negro church was \$1,096 in 1926. Of this amount, 83.1 percent went for current expenses and improvements, 14.3 percent for benevolences and missions, and 2.6 percent was unclassified.

Urban and rural churches.—Approximately 75 percent of the Negro churches were rural in 1926. The statistics for urban and rural churches, separately, bring out the striking contrasts between these two types of churches. The average country Negro church had 91 members who worshiped in a church building valued at \$2,115 and expended annually, \$561; while the average city church had 220 members, a church edifice worth \$16,279, and yearly expenditures of \$2,738 per church.

TABLE 1.—PERCENT DISTRIBUTION OF URBAN AND RURAL NEGRO CHURCHES AND MEMBERSHIP FOR DENOMINATIONS HAVING 50,000 OR MORE MEMBERS, 1926

¹ Includes only organizations reporting members.² Membership as defined by the particular denomination.³ Figures are to be used with due consideration of the number of members not so reported.⁴ The statistics given relate only to the Sunday schools reported by individual churches and do not include undenominational or union Sunday schools; nor do they include the parochial or week-day schools that are maintained by a number of bodies, particularly the Roman Catholic Church and certain Lutheran bodies.

2 So far as can be learned organic denominational existence has ceased, any organization formerly belonging to this group being included among the independent churches.

CHAPTER XIX.—PERSONS IN STATE AND FEDERAL PRISONS AND REFORMATORIES

Scope.—This report presents statistics for persons in State and Federal penal institutions and reformatories for the calendar years 1930, 1931, and 1932. The data on which this report is based were obtained from prison officials, who entered the desired information on schedules furnished them by the Bureau of the Census. Reports were received in 1932 from the 7 Federal prisons and reformatories, the 6 Federal prison camps, and 100 of the 104 State prisons and reformatories. No reports were received for the State penitentiaries in Alabama, Georgia, or Idaho, in 1930, or from the State Penitentiary of Mississippi in 1931, or from the State penitentiaries in Mississippi and South Carolina in 1932. The data from the State penitentiaries in Alabama and in Georgia, being incomplete, were not used in either 1931 or 1932.

Statistics for State and Federal prisons and reformatories for adults do not cover the entire field of imprisonment in the United States. Prisoners are also confined in county and municipal jails and workhouses, in Army and Navy prisons, in institutions for juvenile delinquents, etc. The State and Federal prisons and reformatories undoubtedly contain the majority of those imprisoned for serious offenses, but there is sufficient variation in the laws and judicial practices, as between one State and another, to make comparisons between States on the basis of State prison figures alone rather difficult and sometimes unsatisfactory.

In some States—Ohio, for instance, prisoners sentenced for over 1 year cannot be committed to county institutions; in other States—Pennsylvania, for example, prisoners may be committed to serve long-term sentences in county penal institutions. In States of the first type, therefore, State prison commitments represent all commitments for terms of over 1 year, while in States of the second type only a part of such commitments are to State prisons, and an indeterminate number are to county jails or workhouses.

Prison statistics, furthermore, even if obtained from all classes of penal institutions, cannot be taken as a complete index either of the extent of crime or of the punishment of crime. Many offenders are never arrested, many of those arrested are never brought to trial, and a large proportion of those tried are not convicted. Then, other forms of punishment and other methods of treating convicted criminals furnish alternatives which may be employed in place of imprisonment. Many of those convicted are given suspended sentences, placed on probation, or are punished by fines rather than by imprisonment. Moreover, suspension of sentence, probation, the fine, etc., are not uniformly employed in the different States at a given time, or in the same State at different times. When they are infrequently used for serious crimes, a large proportion of those convicted will be punished by imprisonment; when they are frequently used, the number of prison commitments will be thereby reduced, even though the number of persons convicted of crime may be on the increase. During recent years, probation has been used to a constantly increasing extent, with the evident result that prisoners have represented a constantly decreasing percentage of all convicted offenders.

Prisoners received from courts.—Negroes constituted approximately one-fifth of all prisoners received

from courts in 1930, 1931, and 1932. The number of Negroes received from courts per 100,000 population indicates that over three times as many Negro males as native white males were committed to prisons and reformatories. The ratio for Negro females was four times that for native white females.

The high commitment rate shown for Negroes is probably in some degree due to the combination of lower economic status, less frequent use of other forms of penal treatment for Negroes, and unfavorable race attitudes on the part of the white race. Proportion of the general population in the so-called "criminal ages" is another factor to be considered when comparing races. It is hardly possible, therefore, to draw any conclusions from the data presented in this chapter, regarding the comparative criminality of race groups.

Age and sex.—Statistics presented here do not show the extent to which crimes are committed by offenders under 21 years of age, because these offenders are likely to be sent to juvenile training schools and reformatories.

Over two-thirds of the Negro prisoners committed in 1930, 1931, and 1932 were between 20 and 40 years of age. The largest number committed was for the age group 21 to 24 years of age.

Less than 6 percent of the Negroes committed in 1930, 1931, and 1932 were females.

Offense.—The offense of each prisoner received under sentence from the courts was reported the same as given in the commitment papers. Prisoners were assigned to the several broad groups on the basis of the legal designation of the offense for which they were committed.

The principal offenses of male Negroes, arranged in accordance with the largest number of prisoners committed, were: Burglary, larceny, and auto theft, robbery, homicide, assault, and violation of liquor laws. The principal offenses of female Negroes were: Homicide, larceny, and auto theft, assault, sex offenses, and violation of liquor laws. The numerically preponderant offenses of which Negro prisoners received from courts in 1932 were convicted, were as follows: Males under 25 years of age, burglary, larceny; males, 25 to 34 years of age, burglary, larceny, assault, homicide, and violation of liquor laws; males, 35 years and over, burglary, larceny, and violation of liquor laws; females under 25 years of age, sex offenses, larceny, and homicide; females, 25 to 44 years of age, homicide, larceny; and females, 45 years old and over, homicide and larceny.

Length of sentence.—The average definite sentence of Negro males received from courts in 1931 was less than that for native whites and foreign-born whites for homicide, robbery, assault, forgery, and larceny and greater than the average definite sentence given native white males for rape, burglary, sex offenses, except rape, and for violation of drug laws.

Prisoners received from courts under penalty of death and prisoners executed.—The number of executions shown in the tables in this chapter exceeds the number committed under the penalty of death, since some of those executed had not been committed to State and Federal institutions. More Negroes were executed in 1932 than whites, but more whites than Negroes were executed in 1930.

CHAPTER XX.—AGRICULTURE

Scope.—The statistics presented in this chapter relate only to farm operators. Negroes employed on farms as laborers or wage hands, domestic servants, etc., are not included.

In some of the tables, statistics are presented for farms operated by colored operators. The value of these statistics relating to the aggregate colored, as statistical indicators of conditions and tendencies among Negro farm operators, varies from State to State, as the proportion of colored other than Negro varies in the aggregate of colored farm operators.

However, in the United States as a whole, 96.4 percent of all colored farm operators were Negro in 1930. In the South as a whole and in each Southern State, with the exception of Oklahoma, the colored other than Negro constitute a negligible proportion among colored farm operators. In 1930, Negroes constituted 98.8 percent of all the colored farm operators in the South. In no Southern State, except Oklahoma, was the proportion of Negroes in the aggregate of colored farm operators less than 97 percent.

Statistics in some of the tables relate only to the South. Of all Negro farm operators, 98.7 percent were in the South in 1930.

Number of farm operators.—In 1930, there were 882,850 Negro farm operators in the United States. Negro farm operators constituted 14 percent of all farm operators while the Negro population represented 9.7 percent of the total population. There were Negro farmers in every State and in more than two-thirds of all the counties in 1930. Of the 882,850 Negro farm operators, 98.7 percent were in the South, 1.3 percent in the North, and 0.1 percent in the West.

Between 1920 and 1930, the number of Negro farm operators decreased 4.6 percent. The number of Negro farm operators in the North and West increased but decreased in the South. Within the South itself, there was a decrease of 22.6 percent in the number in the South Atlantic division and increases of 12.4 percent and 4.4 percent in the West South Central and East South Central divisions, respectively.

Farm acreage in 1930.—Negroes operated 3.8 percent of all land in farms in the United States. The acreage in farms operated by Negroes decreased 9.3 percent during the decade, 1920-30. The average acreage per farm operated by Negroes was 42.6 as compared with 176 for white farm operators.

In the South, the acreage in farms operated by Negroes represented 10.7 percent of all land in farms and acreage from which crops were harvested on farms operated by colored operators constituted 18.9 percent of the total crop land from which crops were harvested.

Value of farm land and buildings.—The value of land and buildings for farms operated by Negroes in 1930 was \$1,402,945,799. This value was 37.9 percent less than the value reported for farms operated by Negroes in 1920. The average value of land and buildings per farm was \$1,589 in 1930 as compared with \$2,439 in 1920. The average value per acre of land and buildings on farms operated by Negroes decreased from \$54.49 in 1920 to \$37.32 in 1930, or a decrease

of 31.5 percent. The average value per acre in 1930 was greater in the North and West than in the South.

Value of farm implements and machinery.—The value of implements and machinery on farms operated by Negroes was \$60,327,856 or an average of \$68 per farm.

Value of farm dwelling.—The value of the dwelling on farms operated by Negroes and for which value of dwelling was reported was less than \$500 on 82.9 percent of the farms, between \$500 and \$999 on 13.7 percent of the farms, and between \$1,000 and \$1,999 on 2.8 percent of the farms.

Term of occupancy of colored farm operators.—In 1930, of the colored farm operators in the South who reported the number of years they had been operating the farm, 23.6 percent had been on the farm which they were operating less than 1 year; 16.7 percent had been on the farm, 1 year; 22.1 percent, 2 to 4 years; 14.4 percent, 5 to 9 years; and 23.1 percent, 10 years and over.

Farm facilities on farms operated by colored operators.—Telephones were reported on 0.5 percent of all farms operated by colored operators; electric lights, 0.3 percent; and water piped into dwellings, 0.3 percent, in 1930. There was an average of 4.7 colored farm operators for every automobile reported on farms operated by colored operators in the South in 1930.

Selected farm expenditures on farms operated by colored operators.—In 1930, of all colored operators in the South, 32.3 percent reported expenditures for feed, 18.2 percent reported expenditures for farm labor, 14.1 percent reported expenditures for farm implements and machinery, and 50.7 percent reported expenditures for fertilizer for 1929.

Cooperative sales and purchases on farms operated by colored operators.—In the South, 1.1 percent of the colored farm operators reported sales through farmers' cooperative organizations in 1929. The average sales of products per farm reporting was \$674. Approximately 0.6 percent of the colored farm operators in the South reported purchases through farmers' cooperative organizations. The average value of the products purchased was \$129.

Livestock on farms operated by colored operators.—In the South, of the farms operated by colored operators 73.9 percent reported horses and/or mules. 47.1 percent reported cattle, and 57.8 percent reported swine in 1930. There were almost three times as many mules as horses on farms of colored operators in the South in 1930. Milk was reported as produced on only 13.1 percent of the farms operated by colored operators in the South.

Production of cotton, tobacco, and other crops on farms operated by colored operators.—In 1929 there was produced on farms operated by colored operators 32.4 percent of the total cotton produced in the South, 24.9 percent of the sweetpotatoes, 18.9 percent of the tobacco produced, 16.4 percent of the total corn harvested for grain, 10.1 percent of Irish potatoes produced, 2.2 percent of the oats threshed for grain, and 1.7 percent wheat threshed. Cotton was reported

as produced on 83.5 percent of all the farms operated by colored operators in the South, corn for grain on 78.8 percent, sweetpotatoes and yams on 34.2 percent, wheat on 3.5 percent, Irish potatoes on 16.5 percent, tobacco on 8 percent, and oats threshed on 0.8 percent.

Number of farms by type.—Type of farm was based on sources of income. Value of products from a particular source in relation to the value of products from all sources was a primary basis used in classifying farms by types. "Source" relates to the product or products from which the income is derived, resulting, in certain cases, from the sale of the single product or, in other cases, from the sale of a group of products. Products used on the farm itself are not included except those which are used by the family of the farm operator. The total value of all farm products includes the value of crops, livestock and livestock products, sold or traded, forest products sold, and the value of the products used by the operator's family; but excludes receipts from boarders, lodgers, campers, etc.

For each of the types shown, sales or anticipated sales of the following products, or groups of products, had to represent 40 percent or more of the total value of all products of the farm in order to be so classified.

Cash grain.—Corn, wheat, oats, barley, flax, rye, emmer and spelt, buckwheat, rice, and grain sorghum.

Cotton.—Cotton (lint) and cottonseed.

Crop specialty.—Sweet sorghum for sirup, sugarcane, sugar beets, maple sugar and sirup, soybeans, cowpeas, velvet beans, ripe field peas and beans, tobacco, hay, peanuts, potatoes (Irish or white), sweetpotatoes, mushrooms, hops, broomcorn, and other field crops.

Fruit.—Small fruits, tree fruits, nuts, and grapes.

Truck.—All vegetables sold.

Dairy.—Milk, cream, butterfat, butter, and dairy cows and calves.

Poultry.—Chickens, ducks, geese, turkeys, and eggs.

Animal specialty and stock ranch.—All classes of meat animals, such as beef cattle, sheep, and hogs; also wool, mohair, and slaughtered animals.

The chief distinction between "stock-ranch" and "animal-specialty" farms lies in the ratio of the pasture land to the crop land.

General.—Farms were classified as "general" where the value of products from any one source did not represent as much as 40 percent of the total value of all products of the farm. If the value of products from each of two sources represented 40 percent or more of the total, the farm was classified as "general" except for specialized combination types, such as cotton-tobacco, fruit-truck, dairy-poultry, and other similar combinations, when it was classified as one or the other of these types, depending upon which was dominant in the locality.

Self-sufficing.—Where the value of the farm products used by the family was 50 percent or more of the total value of all products of the farm, it was classified as "self-sufficing."

Abnormal farms.—This type includes five subtypes:

1. Institutions or country estate.

Institution.—Farms operated by public or semi-public agency.

Country estate.—Farms over 10 acres in size, on which the value of residence was \$25,000 or more.

2. **Part-time.**—Farms on which the value of products did not exceed \$750 and the operator spent 150 days or more at work not connected with the farm or reported an occupation other than farming.

3. **Boarding and lodging.**—Farms on which receipts from boarders and lodgers represented 50 percent or more of the value of farm products.

4. **Forest products.**—Farms on which the value of forest products represented 50 percent or more of the value of all farm products.

5. **Horse farms, feed lots, and livestock dealers.**

More than three-quarters of the farms operated by Negroes in 1930 were classified as cotton farms, 7.5 percent as crop specialty (mostly tobacco farms), and 7.3 percent as abnormal farms (mostly part-time farms).

Value of all farm products.—Value of all farm products includes the value of crops sold or traded, the value of livestock sold or traded, the value of livestock products sold or traded, the value of forest products sold, and the value of farm products used by the family of the farm operator.

The total value of farm products on farms operated by Negroes in the South, was \$646,641,216, in 1929, or an average value of \$732 per farm. Since a large portion of the farms operated by Negroes was rented, only a part of the value of all farm products produced on farms operated by Negroes was received by Negroes. Of the total value of all farm products, 78.7 percent was derived from crops sold and traded, 16.6 percent was derived from products used by family of the farm operator, 2.4 percent from the value of livestock products sold or traded, 1.6 percent from the value of livestock sold or traded, and 0.6 percent from the value of forest products sold.

Tenure.—Farm operators are classified, according to the tenure under which they operate their farms, into four general classes, as follows:

Full owners.—Farm operators who own all the land which they operate.

Part owners.—Farm operators who own part of the land which they operate, and rent and operate additional land.

Managers.—Farm operators who operate farms or ranches for the owners, receiving wages or salaries for their services.

Tenants.—Farm operators who operate hired land only.

In this report separate figures are shown for three classes of tenants, namely, (1) cash tenants who pay a cash rental, as \$7 per acre for crop land or \$500 for the use of the whole farm; (2) croppers who are defined as share tenants, to whom landlords furnish all the work animals; and (3) all other tenants, including those giving a share of the products for the use of the land or a share for part and cash for part.

Number of farms by tenure.—Of the total Negro farm operators in the United States in 1930, 15.8 percent were owners, 4.7 percent part owners, 11.1 percent cash tenants, 44.7 percent croppers, 23.5 percent other tenants, and 0.1 percent managers. Over 79 percent of the Negro farm operators were tenants in 1930. In the South, more than two-fifths of the Negro farm operators were croppers.

Farm acreage by tenure.—In the South in 1930, the average size of farms operated by colored full owners was 64.1 acres; by colored part owners, 59.5 acres; by colored cash tenants, 41.8 acres; and by colored other tenants, 36.6 acres. The average acreage from which crops were harvested in 1929 was for colored full owners, 21.4 acres; for colored part owners, 26.8 acres; colored cash tenants, 23.5 acres; and colored other tenants, 23.7 acres.

Term of occupancy of colored farm operators by tenure.—Of the 174,626 colored owners and managers reporting years on the farm in the South, 4.2 percent reported occupancy of less than 1 year, 4.7 percent occupancy of 1 year, 11.8 percent occupancy of 2 to 4

years, 15.5 percent occupancy of 5 to 9 years, and 63.7 percent occupancy of 10 years and over. In 1930, of the colored tenants, 28.6 percent reported occupancy of less than 1 year, 19.8 percent occupancy of 1 year, 24.8 percent occupancy of 2 to 4 years, 14.2 percent occupancy of 5 to 9 years, and 12.7 percent occupancy of 10 years and over.

Value of land and buildings, and farm implements and machinery, by tenure.—The average value in the United States of farms operated by Negro owners was \$1,848, and by Negro tenants, \$1,503 in 1930. The average value per acre was, for Negro owners, \$29.86; and for Negro tenants, \$40.29. The average value of implements and machinery on farms operated by Negro owners was \$109 and by Negro tenants, \$57.

Mortgage indebtedness on farms owned by colored operators.—Of the 140,496 farms operated by colored full owners in the South in 1930, 60.4 percent were reported as free from farm mortgage debt, 29.9 percent were reported as mortgaged, and for 9.7 percent there was no report as to mortgage status. The farms operated by full owners on which mortgage debt was reported were larger in size, and had a greater value of land and buildings than those operated by full owners, reported free from mortgage debt.

The average charges (interest, commissions, bonuses, and premiums charged) were \$62 per farm in 1929 and the ratio of such charges to the mortgage debt was 7.3 percent. The average amount of debt per farm was \$844 and the owner's equity averaged \$1,449 in 1930.

Crops by tenure of colored farm operators.—In 1929, 28.6 percent of the cotton crop of the South was produced on farms operated by colored tenants and 3.8 percent on farms operated by colored owners. Over 17.6 percent of the total sweetpotato and yam crop of the South in 1929 was produced on farms operated by colored tenants and over 7.2 percent on farms operated by colored owners. Almost 15 percent of the tobacco crop produced in the South in 1929 was produced on farms operated by colored tenants and 4 percent was produced on farms operated by colored owners. Of the total amount of corn harvested for

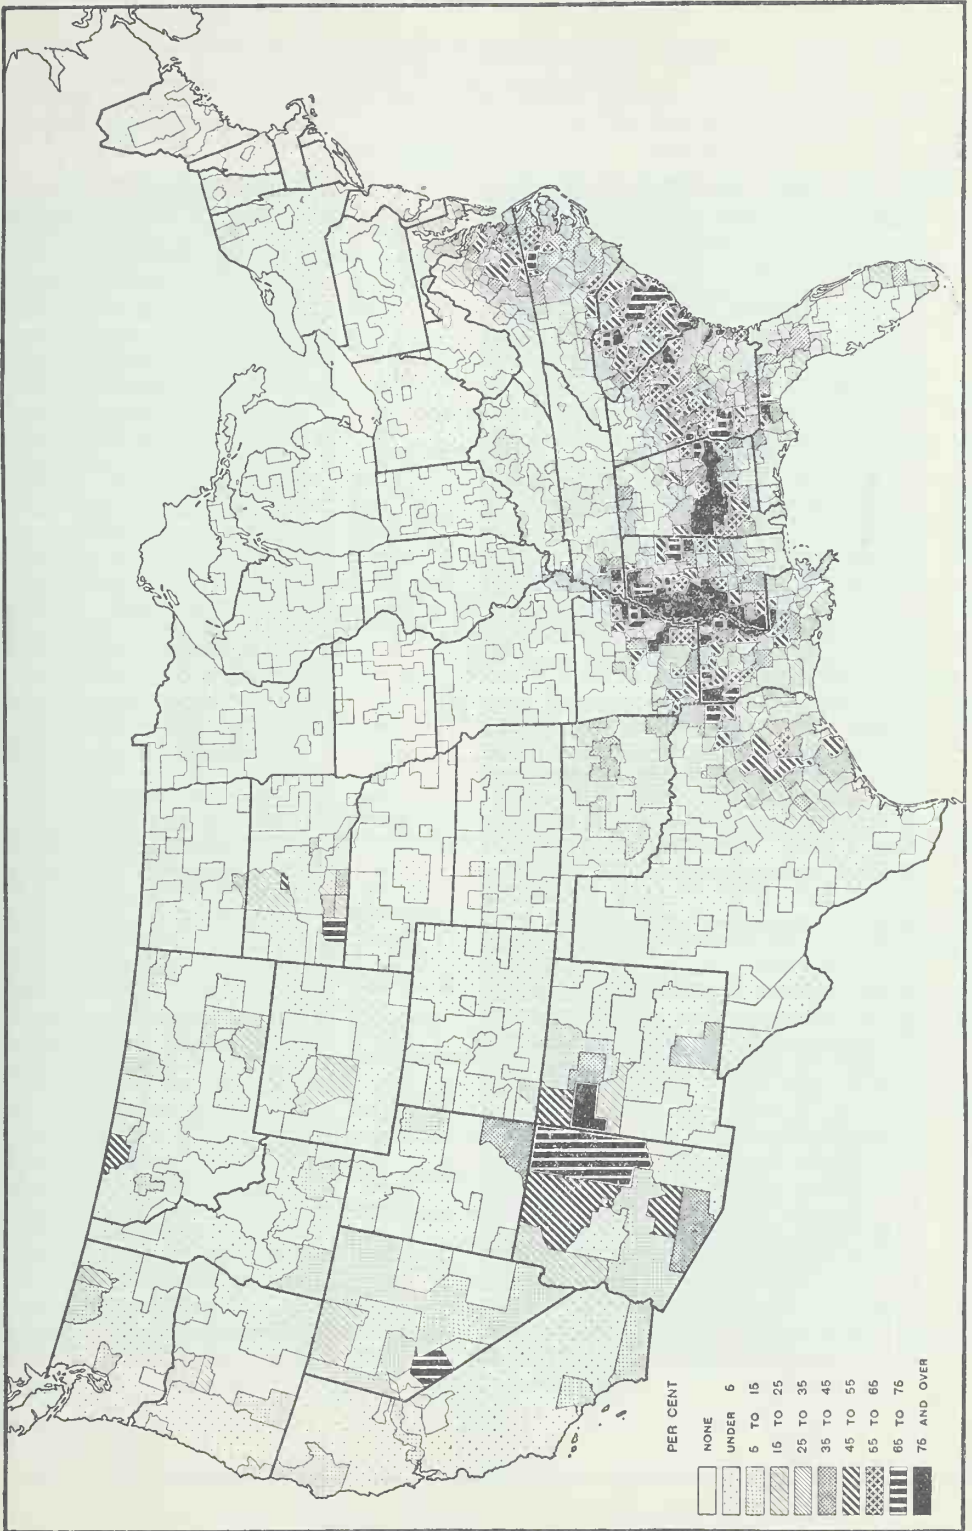

grain in the South in 1929, 12.3 percent was produced on farms operated by colored tenants and 4.1 percent on farms operated by colored owners.

Negro farmers constitute a national asset.—The data presented in this chapter conclusively show that as farm owners, tenants, and managers, Negroes constitute an appreciable but diminishing national asset. While Negro farmers, like those of most racial groups, materially decreased in number during the decade 1920 to 1930, their fields of operation have been widely extended throughout the States. The figures further show that 20 years (1910 to 1930) of migration from the rural districts, particularly of the South, has not increased the number of Negro farmers in the North; has reduced the number in the South, and has increased only to a small extent the number in the West.

Ten years' losses.—As reported at the Census of 1920 there were 925,708 Negro farmers operating 41,432,182 acres, with land and buildings valued at \$2,257,645,325, and a 23.6 percent ownership consisting of 218,612 farms, 13,948,512 acres, with land and buildings valued at \$554,158,003. As reported 10 years later, at the Census of 1930, the number of Negro farm operators had decreased to 882,850; their land in farms to 37,597,132 acres; the value of the land and buildings to \$1,402,945,799. Their ownership had dropped to 20.5 percent; farms owned decreased to 181,016, and the value of their owned land and buildings fell to \$334,451,396.

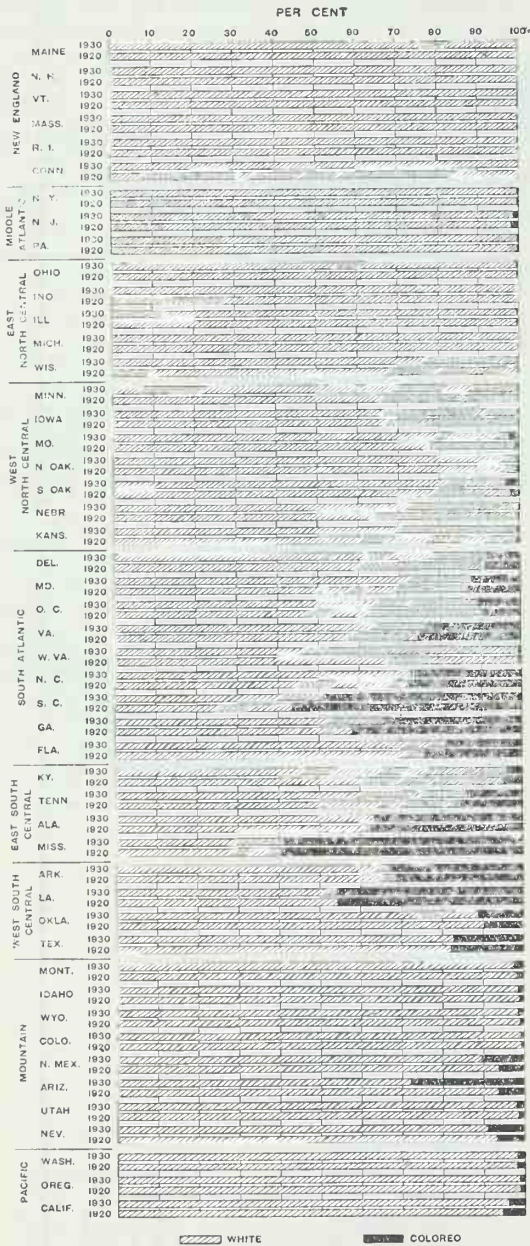

Improved agricultural credit system encourages ownership.—The acreage loss of Negro farm owners during the 10 years, 1920 to 1930, was most significant. Their loss of 2,749,619 acres was equivalent to 4,296 square miles, or an area more than twice that of the combined area of Delaware and the District of Columbia. Due, however, to a reorganized and greatly improved governmental agricultural credit system with a more comprehensive and liberal administrative policy, and to the further fact that slightly in excess of 28 percent of the colored owners in the South were under 45 years of age, and 58 percent under 55 years, increases in the number of Negro farm owners and in owned acreage is now a possibility.
